FULLSTACK WEB DEVELOPMENT AND CYBER SECURITY

Elite and selective Full Stack development and cyber-security education program with modern development tools, The program is mentored by industry-experienced seniors and attending it requires going through a thorough screening process.

Developed projects such as:

- "Korenify" - a web-scraper based, **fully functional** Spotify clone, built with GraphQL and multiple tools to implement a functioning spotify-like application, including downloading full playlists.
- Easy-Peasy-Backend:
Hebrew demonstration live at the Scale-Up Velocity offices at TLV.
English demonstration.

EPB is an NPM package that, via a CLI and it's own client, writes your server for you - in GraphQL. Generates resolvers, type-definitions, Typescript interfaces and Database schemas, all with a few simple user inputs. Also generates CRUD operations for any Database schema you desire with the click of a button.

- Scrape.net: a website composed of a client and four microservices. Accepts custom scrape requests and regularly checks for suspicious activity on subscribed websites and analyzes it.
Scale Up Velocity, 2021
- World Trivia app - a self-learning web-game that implements various concepts of self-learning capabilities to enhance user experience.
